

Have a group of “tanks” that starts as just one, and as you level up, you get upgrades to specific tank archetypes as well as more tanks at larger increments. Ex: every 5 levels, gain additional tank(s), and every normal level gets a random buff to one of your tank types, requiring the player to balance out whether they want variety or to focus on one type.

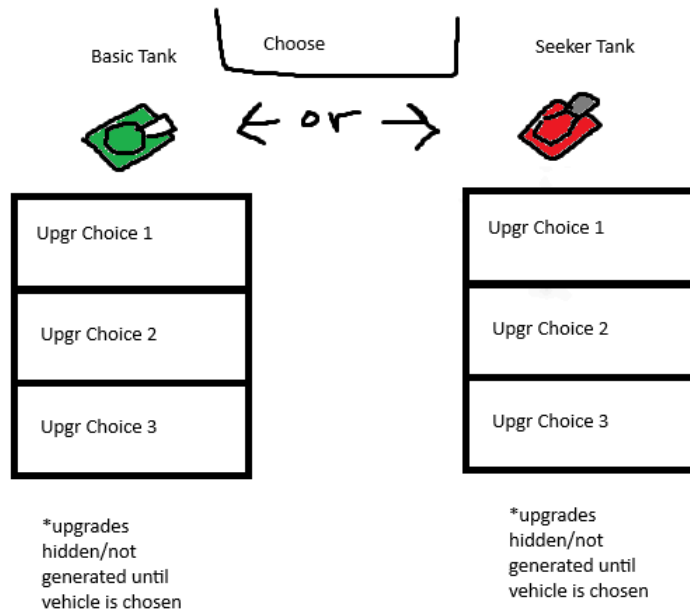

Big Level up (in increments of some number we come up with)

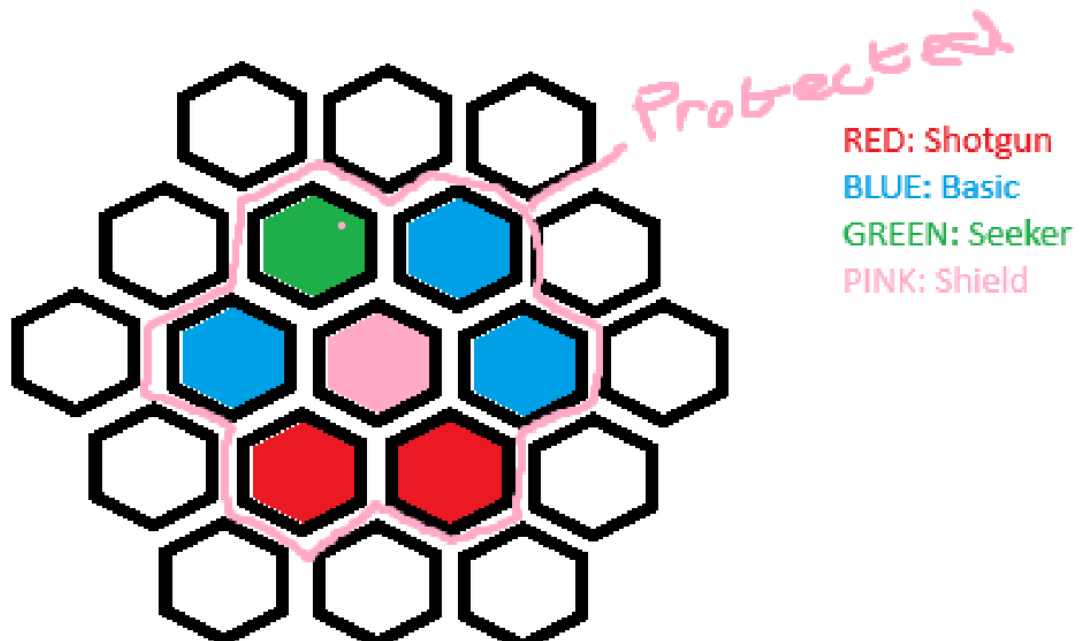

Regular Level Up (chance for each upgrade to be for a type of tank that the player currently has.

^ newest upgrade sketch

- On upgrade, increase the base stats of the vehicle type that is chosen before upgrades are shown.
- Tank classes can have different geometrical shapes to differentiate. eg: circle for basic, pentagon for seeker, triangle for spread.
- Have the count max out at some number of tanks, but allow the player to get rid of ones they don't want, so that they don't turn into just a massive blob that gets hit by everything
- Shared health so that the difficulty goes up as more tanks are acquired, increasing the effective hitbox and making dodging harder
- Survivor-like enemies where basic ones just inch towards the center/player and more complex ones that can have weird paths like sine waves or tanks that don't move.
- ~~Skill trees for each tank type in main menu~~
 - ~~I really want to create some super version of each tank that is accessible through the skill tree. I want it as a very low chance as a level up bonus.~~
- In order to add more strategic choices make the tanks placeable on a grid of some sort and they will move together like that. This means we could add a shield/booster tank and allows more strategic placements of other tanks. (eg seekers on opposite sides so they don't focus too hard on one side) movement and enemy pathing will both be based on the center grid no matter if something is there or not.

Maybe tank grid 4 total so there is less crowding? I like my initial idea of 7 but zooming out a lot to fit them makes the art look fugly

Player vehicles, and level up abilities are here:

https://www.canva.com/design/DAHCMQRBTsU/z97dYBDUx0bA6SUNCWillw/edit?utm_content=DAHCMQRBTsU&utm_campaign=designshare&utm_medium=link2&utm_source=sharebutton

Enemies and their behaviors:

- Drone: flies straight towards the player. Most basic enemy, suicide bomber. (explode on contact)
- Drone 2: flies passively very slowly but if the player gets within its range it locks on and flies quickly towards them. (explode on contact)
- Bomb truck: Drive straight towards the player. Basically a tankier, slower drone with vehicle movement (has a turn radius). (explode on contact)
 - Should it be a ramming truck to make less explode on contact enemies?
- Missile (AGM-55): Flies along a telegraphed line straight across the map. Spawn in with a vector near/on top of the player mass forcing movement. (explode on contact)
- AT Pillbox: Stationary enemy that shoots projectiles at the player.
- Missile Pillbox: Same as pillbox but inherits attributes of the Missile. It will telegraph a line towards the player and shoot a missile at them which flies very quickly. Player must dodge the telegraph before it expires or else they will be hit.

- Radar Truck: Same movement model as truck but stops a certain distance away from the player. It then will call in missiles (not the enemy) that explode in circular telegraphed AoEs around the player.
- Boss (big tank): Drives towards the player very slowly, same movement as the bomb truck with much more health. Also has a turret that actively shoots at the player.

(explode on contact) = deal a portion of remaining health as damage on contact.

Else = deal constant damage while colliding.

How enemies could be spawned:

We can use a mix of a director and preset enemy types. The director can choose from specific enemies with cost and more enemies get unlocked as time progresses and then special boss waves can have the director turn off or have very specific enemies that spawn with it.

Example table of what values could be

Enemy	Time (when it starts spawning)	Price	Weight	Constraints
Drone	0:00	10	100(-30 at 3:00)	x
Bomb Truck	1:00	30	30(+20 at 2:00)	x
AT Pillbox	3:00	100	20	Max of 10
Drone 2	4:00	40	30	x
Missile	5:00	40(x3)	15	Spawns in 3s
Missile Pillbox	6:00	200	10	Max of 10
Radar Truck	7:00	500	5	Max of 2

Director resource variables:

- Name: string
- Description: string
- Initial spawn weights: []
- Diff mod 1: []
- Diff mod 2: []
- Diff mod 3: []
- Diff mod 4: []
- Diff mod 5: [] // Final spawning weights
- Wallet_size: float
- Spawn_speed: float
- Special tag: enum

Director AI:

- **Normal: The default director. Buy enemies, with new enemy types unlocked every five seconds.**
- **Drone Spammer: Only buys drones.**
- Drone expert: Drones deal increased damage (same spawning split) (idk if this is a pain to do)
- Technician: Enemies cost twice as more, but spawn with twice the HP & twice the damage
- **Aggressive: Buys enemies twice as fast, as a result, uses up money twice as fast.**
- **Big Wallet: Starts with more money, but buys enemies slower.**
- **Missile hell: Starts with less money and only buys missiles.**
- **Thrifty: Has an increased bias towards buying cheaper enemies (drones, bomb trucks, and missiles).**
- **Expert: Like the normal director, but all enemy types can be bought to start.**
- Explosive expert: bomb truck and missiles do increased damage (same spawning split) (idk if this is a pain to do)
- Random: Buying is all random, who knows?!
- **Backwards: Like the normal director, but the enemy options are reversed.**
- **Bullet hell (pillbox only): Starts with less money and only buys pillboxes.**

Normal Director (10,000 budget) (0.5 spawn speed)

- 2:24 to use budget (1:16 to use half)
- 2:33 to use budget (1:23 to use half)

Normal Director (5,000 budget) (0.35 spawn speed)

- ~1 minute to use budget
-

Map Randomization:

- Random buildings can spawn in blocking ground movement (player tanks, enemy ground units, & projectiles) but not air units (drones, missiles, radar truck strikes)
- Mud patches which slows down ground vehicles both friendly and enemy.
- Repair stations which provide limited healing for staying stationary. (short start up period -> repairing -> depleted of resources)
- Small rocks and trees for decoration

Player Tank system: (just spitting ideas)

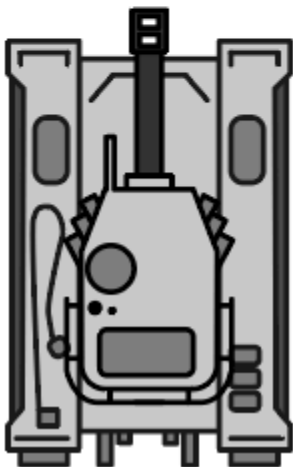

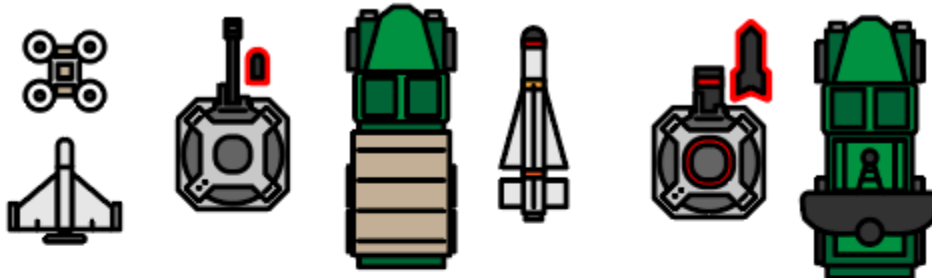

- Health/permadeath idea 1: tanks have individual health and if they “die” they are disabled for 30 seconds, and after the timer runs dry they come back at 10% health. The only way to loose is if all of your tanks are disabled at once.
- Acquiring tanks Idea 1: Player chooses one base tank to take in, and unlocks more tanks through level ups completely randomly
- Acquiring tanks Idea 2: The player starts with a basic tank, and can only unlock more basic tanks through leveling up. The different types of tanks can be unlocked with turret items that augment the basic tank to be the new one. These would be dragged onto the

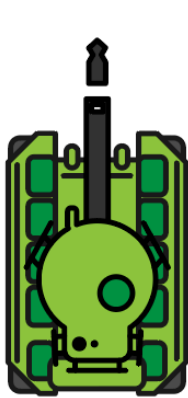

tanks in the formation to augment them, and could be dropped randomly by enemies or on specific level ups.

- Need to think of how to balance tank acquisition this way and maybe rethink level up system. Maybe instead of locking the tank types upgrades until you acquire them they could instead always be available and would show [unlock] as a button instead of the 3 upgrade options and it would just give you one turret item. Instead of unlocking new tank types at increments the slots will unlock with a default tank at the increments
 - First 4 levels always buff basic tank, on level 5 unlock 2nd basic and allow new turrets to show up in upgrades, add new turret as an upgrade option for non-basic tanks
 - On upgrade increase the base stats of the vehicle type that is chosen before upgrades are shown.
- Synergies idea: Certain tanks synergize with eachother giving unique bonuses to those tanks affected. Will be better with 4 tanks in the grid to give player more options to cover the limited tank count.
